SUMMARY

With 5+ years of experience building production systems, I specialize in creating applications that combine the reliability of traditional backend engineering with the innovation of Web3 technology. I've worked with startups and enterprises to deliver scalable solutions that solve real-world problems.

EXPERIENCE

CLAADME

August 2024 – November 2024

Senior Backend Developer

- Architected and optimized high-performance RESTful APIs using Python, Django, and Django REST Framework to support high-traffic social platform workloads.
- Led PostgreSQL performance tuning and query optimization initiatives, improving data throughput and reducing API response latency.
- Designed scalable backend workflows using Dockerized environments, strengthening deployment consistency and service reliability.
- Implemented efficient caching and real-time data handling mechanisms to enhance user engagement features and platform responsiveness.
- Collaborated cross-functionally with frontend and product teams to define API contracts, ensuring seamless integration and accelerated feature delivery.
- Strengthened backend security posture through structured validation, authentication hardening, and production-ready error handling practices.

MEDICONNECT SYSTEM SERVICES

June 2023 – April 2024

Back End Developer

- Refactored core Django services to improve backend processing efficiency and system responsiveness across critical workflows.
- Performed advanced PostgreSQL query optimization and indexing strategies to eliminate performance bottlenecks and reduce data retrieval latency.
- Designed and implemented caching strategies within Django REST Framework to decrease server load and improve API response times.
- Integrated third-party services through secure, well-documented APIs with robust authentication and reliable synchronization mechanisms.
- Improved system stability through structured error handling, logging improvements, and production-grade validation practices.

BETTER LIFE NIJA

June 2022 – December 2022

WordPress Developer

- Engineered modular, standards-compliant WordPress solutions using PHP to improve maintainability and long-term scalability.
- Implemented Git-based workflows to streamline collaboration, version control, and deployment consistency.
- Optimized frontend assets (CSS/JavaScript) to enhance performance, responsiveness, and cross-browser compatibility.
- Customized themes and plugins with a focus on extensibility and long-term maintainability.

CETO DATA WORKS

October 2019 – July 2021

Back End Developer

- Developed secure, scalable backend systems using Django to support data-driven applications and external service integrations.
- Architected efficient database schemas and relational models to ensure performance, maintainability, and long-term system growth.
- Integrated secure RESTful APIs to enable reliable communication between internal services and third-party platforms.
- Translated evolving business requirements into production-ready backend solutions aligned with performance and security standards.
- Maintained high engineering standards through automated testing, structured code reviews, and adherence to clean architecture principles.

EDUCATION

TARABA STATE UNIVERSITY

2025

Bachelor of Science in Computer Science • Taraba, Nigeria

INVOLVEMENT

SANDLIP OASIS

March 2025 – Present

Backend and Web3 Instructor

- Design and deliver curriculum covering backend engineering and Web3 development, including smart contracts and end-to-end dApp architecture.
- Mentor students through hands-on project development, guiding them from system design to deployment.
- Provide technical coaching on API architecture, smart contract integration, and scalable application design.

AWARDS & HONORS

CRYPTO CITIES HACKATHON

2025

Infinita City

- Created a plug-and-play tool for freelancers to mint NFTs as proof of completed work, establishing a trustless work history.

ALGORAND REGIONAL HACKATHON

2024

Algorand

- Co-led the development of a decentralized identity and access control system providing end-to-end encryption and verifiable credentials.

MAINTAINER – PYMAJIC

2023

- Developed a Python package providing convenient commands for Django project management.

TECHNICAL SKILLS

Backend: Python, Django, Django REST Framework (DRF), FastAPI, Flask, RESTful API Design, PostgreSQL, Database Schema Design, Query Optimization, Redis Caching, Memcached, Celery, Background Task Processing, JWT & OAuth2 Authentication, RBAC, API Security Hardening, Docker, CI/CD Pipelines, Linux Server Deployment, AWS, GCP, Azure, Nginx, Gunicorn, Scalable System Architecture.

Web3: Solidity, Clarity, Rust, Smart Contract Development, EVM-Compatible dApps, Web3.py, Ethers.js, Wagmi, RainbowKit, Wallet Authentication, On-Chain/Off-Chain Integration, Event Indexing (The Graph), ERC-20 & ERC-721 Standards, Tokenomics Logic, Multichain Integration.

Frontend: JavaScript, TypeScript, React.js, Next.js, HTML5, CSS3, Responsive Web Design, Component-Based Architecture, State Management (Context API / Redux), REST API Integration, Authentication Flows, Performance Optimization, Cross-Browser Compatibility, Git, Build Tools (Vite / Webpack), Testing (Jest / React Testing Library).
